

# Sprint 1

Owner: Clayton Ritcher (critcher)

## Backlog

The main goal for this sprint is to start the project, setup the basics for user authentication and profiles, and begin some of the framework backend code for interfacing with external 'apps'.

- Data Model (Clayton) - This should include definitions for our user model, a calendar, events, apps, and 'app settings' (the user-specific instance of an app, complete with their options for that app).
- Registration Page (Michael) - Standard user registration page, prompting the user for a username, email, name, and password. Use email verification to confirm registration.
  - HTML
  - Backend
- About Page (Michael) - A brief explanation of the webapp that is displayed to non-logged-in users.
  - HTML
  - Backend
- Login Page (Michael) - Standard login page with a form to login.
  - HTML
  - Backend
- JSON to Form Converter/Protocol (Clayton) - A protocol and associated converter that allows apps to define a form that they want users to fill out to specify parameters for their app.
